SUBJECT INDEX TO VOLUME 35, 1989

[A]

Acinetobacter 213
actinomycete 27
activated sludge 407
agarose gel electrophoresis 225
alkaline proteinase, fungal 281
amber mutant of *B. subtilis nprE18* 487
ammonia treatment of rice straw 113
anaerobic digestion 151
anaerobic growth 253
anaerobic respiration 253
antibiotic regulation 203
antithrombin activity-producing bacteria .. 11
Arthrobacter globiformis IFO 3062 11
Arthrobacter simplex IFO 12069 11
Arthrobacter sp. AT-25 11
Arthrobacter tumescens IFO 12960 11
Aspergillus oryzae 225
assimilation of carbon compounds, genus *Trichosporon* 1

[B]

Bacillus subtilis 43
Bacillus subtilis, neutral protease mutant, *nprE18* 487
Bacillus subtilis proteases 487
Bacillus thuringiensis 21
bacterial exopolymer production 393
ballistospore-forming yeast 53
Ballistosporomyces gen. nov. 289
Ballistosporomyces ruber sp. nov. 289
Ballistosporomyces xanthus sp. nov. 289
Ballistosporous yeasts 289
Bensingtonia ingoldii sp. n. 53
biohydrogenation 327
biohydrometallurgy 71
Brevibacterium 451

[C]

calmodulin 59
carbon to nitrogen ratio 441
catabolite repression 43
cell-counting 71
cell-wall polysaccharide 233
cell cycle 59
cellular fatty acid composition 327
cellulase enzyme enhanced production 441
chemolithotrophic bacteria 71
chemotaxonomic characteristics of methylotrophs 125
chemotaxonomy 27, 213, 233, 311
chitinase 343
clostridial-type ferredoxin 167
Clostridium perfringens 107, 167
coenzyme Q-9 53
coryneform bacteria 233
cyanobacteria 319
cyanoglucosides 451
Cystofilobasidium capitatum, partial sequences of 18S and 26S rRNAs 173
cytochrome spectra 463

[D]

DAP-stereoisomer 27

[E]

enzyme preparations 369
Escherichia coli 95, 253
extracellular protease, *epr* of *B. subtilis* ... 487

[F]

fatty acids, hexadecanoic 333
fatty acids, hydroxytetradecanoic 333
ferredoxin 107, 167
filter paper activity 441

[G]

galactan sulfate-producing bacteria 11
galactan sulfate, with anithrombin activity 11
glycopeptide 413
gradostat 475
gram-positive methylotrophs 125
growth 481

[H]

heat stress 407
HPLC 27
HPLC method 261
hypercellulase producers 163

[I]

influence of culture age 261
influence of glucose concentration 261
influence of the coenzyme Q extraction duration 261
ionophores 327
iron-oxidation 71
isolated heterocysts 369
isolation and characteristics of methylotrophs 125

[K]

Kondoa gen. nov. 377
Kondoa malvinella comb. nov. 377

[L]

Light-dark-light transition 387
light quality 369
lipid content of bacteria 333
Lipomyces 481
luminous bacteria 363

[M]

marine cyanobacterium *Anabaena* sp. strain CA 369, 387
menaquinone 311
mercury and antibiotic resistance 83
metabolically active isolated heterocysts ... 387
methane-producing bacteria 151
methanol-utilizing bacteria 351
methanol-utilizing *Mycobacterium* strains .. 125
methanolacinia gen. nov. 185
Methanolacinia paynteri 185
Micrococcus luteus 311
minor and major coenzymes Q 261
mixed rumen bacteria 327
molecular phylogency, of *Mrakia* and *Cystofilobasidium* species 173
molybdenum cofactor 95
Monascus spp., protease 281
monoclonal antibody 21
mosquitocidal protein 21
Mrakia and *Cystofilobasidium* species, molecular phylogency of 173
Mrakia frigida, partial sequences of 18S and 26S rRNAs 173
mycolic acid of *Mycobacterium* strains ... 125
mutants 163
Myrothecium verrucaria 343

[N]

N_2-fixing soil bacteria 83
N-Oxide reduction 253
nitriles-utilizing bacterium 451
nitrate reductase 107
nitrate reduction, in *Clostridium perfringens* 167
nitrogenase activity 387
nitrogen-assimilating enzymes 203
nitrogen catabolite repression 203
nitrogen fixation 319, 475
nitrosoguanidine (NG) 163

[O]

outer membrane protein 213
oxidation of fatty acids 151

[P]

partial sequences of 18S and 26S rRNAs, of *Mrakia* and *Cystofilobasidium* species ... 173
partitioning of electrons 151
pesticides 319
phage SAt1 of *Streptomyces azureus* 65
phylogenetic diversity 351
Physarum polycephalum 413
phosphate release 407
phospholipid-phosphatidylserine 333
Photobacterium leiognathi 363
photosynthesis 319
primary structure, of ferredoxin from *Clostridium perfringens* 167
product inhibition model 269
production 343
proteolytic enzyme, fungal 281
psychrophilic bacteria 33
pyruvate, ferredoxin oxidoreductase 107

[Q]

Q_7 *Pichia* 463

[R]

resistance to catabolite repression 441
respiration-dependent primary Na^+ pump 33
restriction analysis of actinophage 65
restriction pattern of ribosomal DNA 225
rhizosphere 475
Rhodosporidium malvinellum, partial sequences of rRNA of 377

Rhodosporidium toruloides, partial sequences of rRNA of 377
5S-ribosomal RNA sequences 351
rRNA partial sequences, of *Rhodosporidium* and *Leucosporidium* species 377
rice 475
rubredoxin 107
rumen ciliates 327
rumen microbial population of steers 113

[S]

Saccharolypospora erythrea 203
Salmonella typhimurium 333
SDS-PAGE 213
serine proteinase, fungal 281
SO_4^{2-} requirement 11
Sporotrichum thermophile 163
sporulation 43
Staphylococcal extra- and intracellular nucleases 429
sulfate-reducing bacteria 151
sulfoxide reduction 253
suppressor for catabolite resistance (*crsA*) 43
synthesis and secretion of exoproteins 429
synthesis and secretion of *Staphylococcal nuclease* 429

[T]

taxonomy of *koji* molds 225
teichoic acid 233
thermophilic fungus 163
Thiobacillus ferrooxidans 71
Trichoderma reesei mutant 441
trimethylamine N-oxide reductase 95
triple protease mutant of *B. subtilis* 487
torB 95

[U]

ubiquinone, genus *Trichosporon* 1
ubiquinone-9 53

[V]

viable deletion mutants of actinophage ... 65
Vibrio 33
Vibrio fischeri 363
Vibrio harveyi 363
volatilization of mercury 83

[W]

Waltomyce 481
Westiellopsis prolifica 319

[Y]

yeast 59
yeasts, isolated from different sources 135
yeast taxonomy 463

[Z]

Zn^{2+}, Mn^{2+} 481
